

RWorksheet_ESTOCE-3b

John Rick Estoce

2025-10-15

#1. Create a data frame using the tble below.

a. Write the codes.

```
# Create data frame with 20 respondents (added Persons_at_Home)
household <- data.frame(
  Sex = c("Male", "Female", "Female", "Male", "Male",
          "Female", "Female", "Male", "Female", "Male",
          "Male", "Female", "Male", "Female", "Male",
          "Female", "Male", "Female", "Female", "Male"),
  Fathers_Occupation = c("Farmer", "Driver", "Others", "Farmer", "Driver",
                         "Farmer", "Others", "Driver", "Farmer", "Others",
                         "Driver", "Farmer", "Driver", "Others", "Farmer",
                         "Driver", "Others", "Farmer", "Driver", "Others"),
  Persons_at_Home = c(5, 6, 4, 7, 5,
                      8, 3, 6, 5, 4,
                      6, 5, 4, 7, 5,
                      6, 5, 4, 3, 4),
  Siblings_at_school = c(3, 5, 2, 6, 4,
                        7, 3, 5, 4, 2,
                        6, 5, 3, 7, 4,
                        6, 5, 4, 2, 3),
  Type_of_House = c("Wood", "Concrete", "Semi-Concrete", "Wood", "Concrete",
                    "Wood", "Semi-Concrete", "Concrete", "Wood", "Semi-Concrete",
                    "Concrete", "Wood", "Semi-Concrete", "Concrete", "Wood",
                    "Semi-Concrete", "Concrete", "Wood", "Concrete", "Semi-Concrete")
)

household
```

	Sex	Fathers_Occupation	Persons_at_Home	Siblings_at_school	Type_of_House
## 1	Male	Farmer	5	3	Wood
## 2	Female	Driver	6	5	Concrete
## 3	Female	Others	4	2	Semi-Concrete
## 4	Male	Farmer	7	6	Wood
## 5	Male	Driver	5	4	Concrete
## 6	Female	Farmer	8	7	Wood
## 7	Female	Others	3	3	Semi-Concrete
## 8	Male	Driver	6	5	Concrete

```

## 9 Female Farmer 5 4 Wood
## 10 Male Others 4 2 Semi-Concrete
## 11 Male Driver 6 6 Concrete
## 12 Female Farmer 5 5 Wood
## 13 Male Driver 4 3 Semi-Concrete
## 14 Female Others 7 7 Concrete
## 15 Male Farmer 5 4 Wood
## 16 Female Driver 6 6 Semi-Concrete
## 17 Male Others 5 5 Concrete
## 18 Female Farmer 4 4 Wood
## 19 Female Driver 3 2 Concrete
## 20 Male Others 4 3 Semi-Concrete

```

b. Describe the data. Get the structure or the summary of the data

```
str(household)
```

```

## 'data.frame': 20 obs. of 5 variables:
## $ Sex : chr "Male" "Female" "Female" "Male" ...
## $ Fathers_Occupation: chr "Farmer" "Driver" "Others" "Farmer" ...
## $ Persons_at_Home : num 5 6 4 7 5 8 3 6 5 4 ...
## $ Siblings_at_school: num 3 5 2 6 4 7 3 5 4 2 ...
## $ Type_of_House : chr "Wood" "Concrete" "Semi-Concrete" "Wood" ...

```

```
summary(household)
```

	Sex	Fathers_Occupation	Persons_at_Home	Siblings_at_school
## Length:20	Length:20	Min. :3.0	Min. :2.00	
## Class :character	Class :character	1st Qu.:4.0	1st Qu.:3.00	
## Mode :character	Mode :character	Median :5.0	Median :4.00	
##		Mean :5.1	Mean :4.30	
##		3rd Qu.:6.0	3rd Qu.:5.25	
##		Max. :8.0	Max. :7.00	
## Type_of_House				
## Length:20				
## Class :character				
## Mode :character				
##				
##				
##				

c. Is the mean number of siblings attending is 5?

```
mean(household$Siblings_at_school)
```

```
## [1] 4.3
```

```
mean(household$Siblings_at_school) == 5
```

```
## [1] FALSE
```

d. Extract the 1st two rows and then all the columns using the subsetting functions. Write the codes and its output.

```
household[1:2, ]
```

```

## Sex Fathers_Occupation Persons_at_Home Siblings_at_school Type_of_House
## 1 Male Farmer 5 3 Wood
## 2 Female Driver 6 5 Concrete

```

e. Extract 3rd and 5th row with 2nd and 4th column. Write the codes and its result.

```
household[c(3,5), c(2,4)]  
  
## Fathers_Occupation Siblings_at_school  
## 3 Others 2  
## 5 Driver 4
```

g. Select only all Males respondent that their father occupation was farmer. Write the codes and its output.

```
types_houses <- household$type_of_House  
types_houses  
  
## [1] "Wood" "Concrete" "Semi-Concrete" "Wood"  
## [5] "Concrete" "Wood" "Semi-Concrete" "Concrete"  
## [9] "Wood" "Semi-Concrete" "Concrete" "Wood"  
## [13] "Semi-Concrete" "Concrete" "Wood" "Semi-Concrete"  
## [17] "Concrete" "Wood" "Concrete" "Semi-Concrete"
```

h. Select only all females respondent that have greater than or equal to 5 number of siblings attending school. Write the codes and its outputs.

```
subset(household, Sex == "Female" & Siblings_at_school >= 5)  
  
## Sex Fathers_Occupation Persons_at_Home Siblings_at_school Type_of_House  
## 2 Female Driver 6 5 Concrete  
## 6 Female Farmer 8 7 Wood  
## 12 Female Farmer 5 5 Wood  
## 14 Female Others 7 7 Concrete  
## 16 Female Driver 6 6 Semi-Concrete
```

#2. Write a R program to create an empty data frame. Using the following codes: a. Describe the results.

```
df = data.frame(  
  Ints = integer(),  
  Doubles = double(),  
  Characters = character(),  
  Logicals = logical(),  
  Factors = factor(),  
  stringsAsFactors = FALSE  
)  
  
print("Structure of the empty dataframe:")  
  
## [1] "Structure of the empty dataframe:"  
print(str(df))  
  
## 'data.frame': 0 obs. of 5 variables:  
## $ Ints : int  
## $ Doubles : num  
## $ Characters: chr  
## $ Logicals : logi  
## $ Factors : Factor w/ 0 levels:  
## NULL
```

#3. Create a .csv file of this. Save it as HouseholdData.csv

a. Import the csv file into the R environment. Write the codes.

```

write.csv(household, "HouseholdData.csv", row.names = FALSE)

data <- read.csv("HouseholdData.csv")

print(data)

##      Sex Fathers_Occupation Persons_at_Home Siblings_at_school Type_of_House
## 1    Male           Farmer             5                  3        Wood
## 2 Female          Driver             6                  5    Concrete
## 3 Female          Others             4                  2  Semi-Concrete
## 4    Male           Farmer             7                  6        Wood
## 5    Male           Driver             5                  4    Concrete
## 6 Female          Farmer             8                  7        Wood
## 7 Female          Others             3                  3  Semi-Concrete
## 8    Male          Driver             6                  5    Concrete
## 9 Female          Farmer             5                  4        Wood
## 10   Male          Others             4                  2  Semi-Concrete
## 11   Male          Driver             6                  6    Concrete
## 12 Female          Farmer             5                  5        Wood
## 13   Male          Driver             4                  3  Semi-Concrete
## 14 Female          Others             7                  7    Concrete
## 15   Male           Farmer             5                  4        Wood
## 16 Female          Driver             6                  6  Semi-Concrete
## 17   Male          Others             5                  5    Concrete
## 18 Female          Farmer             4                  4        Wood
## 19 Female          Driver             3                  2    Concrete
## 20   Male          Others             4                  3  Semi-Concrete

```

- b. Convert the Sex into factor using factor() function and change it into integer.[Legend: Male = 1 and Female = 2]. Write the R codes and its output.

```

data$Sex <- factor(data$Sex, levels = c("Male", "Female"), labels = c(1, 2))
data$Sex <- as.integer(data$Sex)
data

```

```

4. Interpret the graph.

This graph shows how people felt on Twitter from July 14 to July 21, 2020. There are three kinds of feelings in the tweets:

Most tweets were Negative. Almost every day, the red bars are the tallest. This means many people were upset, angry, or sad during this time.

Neutral tweets are in the middle. Some people were just sharing facts or opinions without strong emotions.

Positive tweets are the lowest. There were happy or encouraging tweets, but not as many compared to negative ones.

July 15 and July 21 had the highest number of tweets, especially negative ones.

People on Twitter were mostly feeling negative during these days. There were some neutral thoughts and only a few positive messages.
